

Monitoring Report

CC Docket No. 87-339

July 1991

**Prepared by the Staff of the
Federal-State Joint Board**

In CC Docket No. 80-286

Table of Contents

Introduction and Summary	3
1. Subscribership and Penetration Levels	9
2. Lifeline Assistance Plans	55
3. Costs and High Cost Assistance	101
4. Network Usage and Growth	106
5. Rates and Revenues	139
6. Bypass	162
7. Pooling and Rate Deaveraging	171

Monitoring Report
CC Docket No. 87-339
July 1991

Introduction and Summary

This is the twelfth report of a series of reports being issued over a five-year period that is intended to help telecommunications policymakers and the general public monitor the impact of decisions adopted by the Federal Communications Commission (Commission) during 1987. In these decisions, the Commission adopted the recommendations of the Federal-State Joint Board in CC Docket No. 80-286 to increase subscriber line charges, expand the federal lifeline assistance program, retarget the formula for high cost assistance, and modify the common line pooling system. In an Order released on June 30, 1989, the Commission reduced the frequency of the reports from quarterly to semi-annually, and changed the release dates to January and July.¹ The reports will continue through July 1992.

In an Order released on August 26, 1987, the Commission acted upon the recommendations of the Joint Board in CC Docket No. 80-286 and established a program to monitor the impact of the decisions noted above. This report presents currently available data in each of the seven subject categories selected for monitoring, which are: (1) subscribership and penetration levels; (2) lifeline assistance plans, including both the subscriber line charge waiver and Link-Up programs; (3) costs and high cost assistance; (4) network usage and growth; (5) rates and revenues; (6) bypass; and (7) pooling and rate deaveraging. In an Order released in March 1990, the Common Carrier Bureau concluded that no further reports were necessary in what was formerly the eighth section of the monitoring reports, jurisdictional shifts in revenue requirements.² Therefore, that section has been deleted from this and future reports.

Since our January 1991 monitoring report, new information in each of the seven categories we are monitoring has become available and is incorporated in this report. We do not repeat here much of the material that was contained in our previous report. Section 1 includes new subscribership information for March 1991. Section 2 includes updated information on the lifeline and Link-Up America programs, including new information supplied by the National Exchange Carrier Association (NECA).

1 Establishment of a Program to Monitor the Impact of Joint Board Decisions, CC Docket No. 87-339, Order, 4 FCC Rcd 5480 (1989).

2 That section was the result of a decision in CC Docket No. 86-297 to simplify jurisdictional separations rules and conform those rules to the recently revised Uniform System of Accounts.

Section 3 includes a history of universal service fund payments. Section 4 includes revised usage data by company for non-tier 1 companies. Section 5 includes Consumer Price Index (CPI) and Producer Price Index (PPI) data through June 1991, and other updated rate information. Section 6 includes a summary of the bypass reports filed in April. Section 7 includes updated estimates of the effects of depooling.

We emphasize that our monitoring efforts are being conducted in the context of an open docket (CC Docket No. 87-339) which allows materials, comments, and studies to be submitted at any time. Comments that have been received since the last report are summarized in each section of the report, insofar as they relate to that section.

The Monitoring Report has not revealed to date any harmful effects of the Commission decisions on the variables we have chosen to evaluate. However, this report has proven to be valuable in more ways than merely reporting the effects of regulatory changes. The Monitoring Report brings together in one place a wealth of information on our national telecommunications system, including valuable breakdowns by state and by company.

On July 25, 1991, the Chief of the Common Carrier Bureau released a request for comments³ on a Joint Board staff proposal that the Monitoring Report continue to be published in a modified form for an additional five years beyond the end of the current monitoring program in 1992. The staff proposal includes the elimination of the sections on bypass and jurisdictional shifts, the modification of some of the information requested in other sections, and the addition of two new sections. The first new section would be on revenues, expenses and investment, and the other new section would be on infrastructure and new services that will monitor the deployment of new and experimental services and technologies. Comments on this proposal are due on September 5, 1991, and reply comments are due on September 26, 1991.

The deadline for submission of information for each future monitoring report is the first day of the month preceding the one in which the report is released. Despite this deadline, the staff intends to report all filings made in the docket at the earliest possible time. While materials filed after the formal cutoff date will continue to be included whenever possible, filings received after the deadline will usually appear in the next report. For ease of public reference, we ask that parties submitting materials for the docket provide a duplicate copy to the Public

3 Amendment of Part 36 of the Commission's Rules and Establishment of a Joint Board, Establishment of a Program to Monitor the Impact of Joint Board Decisions, CC Docket Nos. 80-286 and 87-339, DA 91-889, Request for Comments, released July 25, 1991.

Reference Room of the Common Carrier Bureau's Industry Analysis Division,⁴ where copies of all materials filed in the docket are available for public reference.

The following federal and state staff members have contributed to this report and can be contacted for further information. Unless otherwise noted, the federal staff members can be reached at (202) 632-0745.

General Information:

Alexander Belinfante (Federal)
Peyton Wynns (Federal)
Jay Atkinson (Federal) (202) 634-1861
Ronald Choura (Michigan) (517) 334-6240
Robert Loube (D.C.) (202) 626-5145
Mary Steel (North Carolina) (919) 733-0846

Subscribership and Penetration:

Alexander Belinfante (Federal)
Ronald Choura (Michigan) (517) 334-6240
Sam Loudenslager (Arkansas) (501) 682-5824

Lifeline Assistance Plans:

Laurence Povich (Federal)
Joel Shifman (Maine) (207) 289-3831

Costs and High Cost Assistance:

Alexander Belinfante (Federal)
Rowland Curry (Texas) (512) 458-0103
Joel Shifman (Maine) (207) 289-3831
Dean Evans (California) (415) 577-2152
Sam Loudenslager (Arkansas) (501) 682-5824

Network Usage and Growth:

Ramses Mina (Federal)
Paul Pederson (Missouri) (314) 751-7427
Brenda Buchan (Florida) (904) 488-1280

Rates and Revenues:

James Lande (Federal)
Linda Blake (Federal)
Elton Calder (Georgia) (404) 656-4565

Bypass:

Jonathan Kraushaar (Federal)
Fred Sistarenik (New York) (518) 486-2815
Michael Gallagher (New Jersey) (201) 648-7695

Pooling and Rate Deaveraging:

Alexander Belinfante (Federal)
Michael Gallagher (New Jersey) (201) 648-7695
Mark Jamison (Iowa) (515) 281-5611

SERVICE LIST

All items filed in CC Docket No. 87-339 must be filed with the Secretary, Federal Communications Commission, 1919 M Street, N.W., Room 222, Washington, D.C. 20554, and the following Commissioners and staff members:

DOCKET NO. 80-286 JOINT BOARD MEMBERS

Chairman Alfred C. Sikes
Federal Communications Commission
1919 M Street, N.W., Room 814
Washington, D. C. 20554

Commissioner Ervin S. Duggan

1. Subscribership and Penetration Levels

The number and percentage of households that have telephone service represent the most basic measures of the extent of universal service. Continuing analysis of telephone penetration statistics allows us to examine the aggregate effects of Commission actions on households' decisions to maintain, acquire or drop telephone service. This section presents comprehensive data on telephone penetration statistics collected by the Bureau of the Census under contract with the Federal Communications Commission. Along with telephone penetration statistics for the United States and each of the states from November 1983 to March 1991, data are provided on penetration based on various demographic characteristics.

The most widely used measure of telephone availability is the percentage of households with telephone service -- sometimes called a measure of telephone "penetration". This statistic, however, can be subject to large measurement errors. Prior to the 1980s, precise measurements of telephone subscribership received little attention. Traditionally, telephone penetration was measured by dividing the number of residential telephone lines by the number of households. With some households adding second telephone lines and with an increasing number of second homes, measures of penetration based on the number of residential lines became subject to a large margin of error. By 1980, the traditional penetration measure (residential lines divided by the number of households) reached 96% while the number of households reporting that they had telephones in the 1980 census was slightly less than 93%.

Recognizing the need for precise periodic measurements of subscribership, the FCC requested that the Bureau of the Census include questions on telephones as part of its Current Population Survey (CPS), which monitors demographic trends between the decennial censuses. This survey is a staggered panel survey in which the people residing at particular addresses are included for four consecutive months in one year and the same four months in the following year. Use of the Current Population Survey has several advantages -- it is conducted every month by an independent and expert agency, the sample is large and the questions are consistent. Thus, changes in the results can be compared over time with a great deal of confidence. Unfortunately, the results of the CPS cannot be directly compared with the penetration figures contained in the 1980 decennial census. This is because differences in the sampling methodologies exist and because of differences in the context in which the questions were asked.

The specific questions asked in the CPS are: "Is there a telephone in this house/apartment?" and, if the answer to the first question is "no", "Is there a telephone elsewhere on which people in this household can be called?" Although the survey is conducted every month, not all questions

are asked every month. The telephone questions are asked once every four months, in the month that a household is first included in the sample and in the month that the household reenters the sample a year later. Since the sample is staggered, the information that is reported for any given month actually reflects responses over the preceding four months. Aggregated summaries of the responses are reported to the FCC, based on the surveys conducted through March, July, and November of each year. These reports are generally released approximately two months after the final month of each four month survey period.

The Census Bureau data are based on a nationwide sample of about 58,000 households. Because a sample is used, the estimates are subject to sampling error. For the nationwide totals, changes in telephone penetration between consecutive reports of less than or equal to 0.5% are likely to be due to sampling error and cannot be regarded as statistically significant. As explained below, when comparing the same month in two consecutive years, changes of less than or equal to 0.4% are not statistically significant. When comparing annual averages, changes of less than 0.3% are not statistically significant. The annual averages are the average of the 3 surveys of the year in question. For individual states or other subgroups of the U.S. population, the amount of sampling variability is much greater.

The data in this section are not seasonally adjusted. Seasonal analysis of the data indicates that, for the nation as a whole, there is no significant seasonal variation in the "telephone available" statistics. There is, however, a significant seasonal pattern in the "telephone in unit" statistics. This pattern, after allowing for the effects of the upward trend in the data, is an increase of 0.3% from November to March, followed by a decrease of 0.1% from March to July, followed by a decrease of 0.2% from July to November.

Census Bureau figures for March 1991, the most recent data available, show that the percentage of households subscribing to telephone service is 93.6%, which is up 0.3% from March 1990. As a result of an increasing percentage of subscribership and an increasing number of households, 1.3 million households were added to the nation's telephone system between March 1990 and March 1991. The latest penetration rate is the highest ever reported by the CPS.

This section includes figures showing subscribership percentages by state, by householder's age and race, by household size, by family income, and for individual adults by labor force status. The data for individual adults show that 94.5% of those adults in the civilian noninstitutionalized population have a telephone in their household. This figure is up 0.3% from the March 1990 level. This is also the highest penetration rate ever reported by the CPS.

This section contains eleven tables and four charts presenting penetration statistics broken out for various geographic and demographic characteristics.

Table 1.1 summarizes the telephone penetration for the United States, combining information on the number of households with the penetration rates.

Chart 1.1 depicts the nationwide penetration rates for households graphically over time. The values in this chart are taken from the top line of Table 1.2.

Chart 1.2 depicts the states with March 1991 penetration rates ranking in the highest third, middle third, and lowest third. These are based on the "Unit" data in Table 1.2.

Chart 1.3 depicts changes in household penetration rates by state between November 1983 and March 1991. These are based on the "Unit" data in Table 1.2 and the corresponding critical values in Table 1.7. States with statistically significant increases are shown, along with other states with increases and states with decreases. No state had a statistically significant decrease.

Table 1.2 shows the Current Population Survey responses for the United States and for each state for every four months beginning with November 1983. Because the Current Population Survey began collecting this data only in 1983, comparable values are not available prior to November 1983. For each of the surveys, the column headed "Unit" indicates the percentage of households for which the response to the first question was "yes". The column headed "Avail." indicates the percentage of households which responded "yes" to either the first or the second question.

Table 1.3 shows the nationwide penetration rates for households by the size of the household and the race of the householder. It shows that penetration is highest for households of 2 to 5 people.

Table 1.4 shows the nationwide penetration rates for households by family income and the race of the householder. It shows a strong relationship between income and penetration. Caution should be taken in comparing these figures over time, because these income levels are not adjusted for inflation. Thus the same nominal income level at two points in time will reflect different real incomes in terms of purchasing power.

Table 1.5 shows the nationwide penetration rates for households by the age and race of the householder. It shows that the penetration rate is lowest for young and non-white households.

Table 1.6 shows the nationwide penetration rates for all persons at least 16 years old in the civilian noninstitutionalized population by their race and employment status. Since this table is for individual adults rather than households, the total penetration rates are different from those in the previous tables. It shows that penetration is lowest among the unemployed.

Chart 1.4 depicts the nationwide penetration rates for individual adults graphically over time, with the values taken from the totals in Table 1.6.

Tables 1.7 through 1.11 present the critical values at the 95% confidence level for testing the statistical significance of changes over time in the earlier tables. These critical values are relevant because changes less than or equal to the values shown are likely to be due to sampling error and thus cannot be regarded as demonstrating that a change in telephone penetration has occurred. In some cases these critical values are very large because the sample sizes are very small for these subcategories, rendering the estimated penetration rates unreliable. Because there is an overlap of half of the sample from year to year, but no overlap in the sample between surveys that are four months apart, annual changes are less subject to variations in sampling error. Consequently the critical values should be multiplied by 0.8 when making a comparison for the same month in two consecutive years. When comparing the annual averages, the critical values should be multiplied by 0.5774, since these averages are based on three surveys and hence have a lower standard error.

TABLE 1.1
Telephone Penetration in the U.S.

<u>Date</u>	<u>Households</u> (millions)	<u>Households</u> with <u>Telephones</u> (millions)	<u>Percentage</u> with <u>Telephones</u>	<u>Households</u> without <u>Telephones</u> (millions)	<u>Percentage</u> without <u>Telephones</u>

2. Lifeline Assistance

To further the universal service objectives of the Communications Act, the Joint Board and the FCC established lifeline assistance programs to ensure that low-income subscribers do not drop off the telephone network, and additionally to encourage low-income households without service to connect to the network. The FCC is monitoring subscriber participation and telephone usage to determine program benefits and costs.¹ Table 2.1 lists the entities that have been certified by the FCC and the dates of their certification.

The FCC, in conjunction with the states and local telephone companies, has established lifeline programs which are designed to promote universal service by helping low income individuals afford telephone service. The programs, funded through charges ultimately paid by interstate ratepayers, reflect matching local rate reductions approved by state utility commissions, and may take the form of a reduction in monthly charges or a reduction in service connection and installation charges. After state programs are certified by the FCC, local exchange carriers are reimbursed through the National Exchange Carrier Association (NECA) for program expenses. These expenses are not funded by federal tax dollars.

Lifeline certification rules require participating entities to verify subscriber eligibility annually. Local exchange companies rely on state established means tests to meet FCC verification requirements. Annual recertification of both lifeline and Link-Up programs by the FCC is contingent upon the income eligibility criteria established in the initial letter to participating states and local exchange carriers.

On January 17, 1991, the FCC eliminated the State Telephone Assistance Report (FCC Form 496).² The report was established to obtain information related to the annual recertification of lifeline and Link-Up programs. A more timely and accurate report created with the help of NECA will substitute

1 MTS and WATS Market Structure and Amendment of Part 67 of the Commission's Rules and Establishment of a Joint Board, Decision and Order, CC Docket Nos. 78-72 and 80-286, FCC 85-643, 51 Fed. Reg. 1371 (January 13, 1986) at para. 5; and Establishment of a Program to Monitor the Impact of Joint Board Decision, Order, CC Docket No. 87-339, 2 FCC Rcd 5266 (1987).

2 Public Notice; Mimeo Number 11380.

for the FCC Form 496. Eliminating the form does not preclude the Commission from directing state and local exchange companies to file additional information should the need arise.

Table 2.2 provides a list of states participating in the Link-Up program and shows both reimbursements and the number of subscribers receiving assistance between January 1990 and July 1990. Table 2.3 provides a similar survey of states participating in the lifeline programs.³

Under lifeline and Link-Up America programs, benefits are available to persons who pass a "means" test such as eligibility for food stamps or Medicaid. A second requirement for FCC certification is that each applicant's eligibility for benefits be verified. The state has considerable latitude in selecting means tests, shaping the benefits, and determining the geographic availability of the programs. Table 2.4 provides a description of the income means test used by each state utility commission or local telephone company.

Based on the recommendation of the Federal-State Joint Board, the FCC has made available the following three federal lifeline assistance plans:

Plan 1 - On December 19, 1984, the FCC adopted an optional plan which allows a total reduction in fixed charges for telephone service equal to the federal subscriber line charge (SLC) for low income households satisfying a state determined means test subject to verification. This is accomplished by a 50% reduction in the SLC. States wishing to take advantage of this assistance mechanism are required to implement an equal monetary reduction in the local exchange rate for those low income households to be funded from state sources. The assistance is available for a single telephone line for the principal residence of eligible households.

Plan 2- On December 10, 1985, the FCC adopted broader lifeline assistance measures for low income households providing for a total reduction in fixed charges for telephone service of twice the amount of the SLC. This reduction would be achieved through a waiver of the full federal SLC up to the amount matched by state assistance, provided that the state plan meets the following federal requirements:

- a) means test -- highly targeted assistance plan which focuses on those individuals with limited incomes;

3 Tables 2.2 through 2.6 were filed by NECA in this docket on May 31, 1991.

b) subject to verification -- procedures must be established which routinely check to ensure that those individuals eligible under the plans are the individuals benefiting under the plan;

c) availability -- for a single telephone line for the principal residence of eligible households.

The state matching contribution can be in the form of reduced local service rates, reduced connection charges or reduced deposit requirements. No restrictions are imposed on the source of funding for state assistance.

Plan 3- On April 16, 1987, the FCC adopted a two part plan, Link Up America, to connect low income households to the telephone network. Under the first part, federal assistance will be provided to pay one-half of the connection charges, up to a maximum of \$30.00 in benefits, assessed for commencing telephone service.

Under the second part, when a local exchange company (LEC) offers a deferred payment plan, not to exceed 12 months, for service commencement charges and it does not assess the subscribers any interest charges, federal assistance will be available to that LEC to cover the interest on costs of up to \$200. Link-Up is targeted to those qualified individuals who comprise a portion of the approximately 2.9 million low income households who currently are not connected to the public switched network.

On June 23, 1988, the FCC adopted a Notice of Proposed Rule Making in CC Docket No. 88-341 which proposed eliminating the requirement that consumers requesting to be included in the Link-Up America program have lived at an address where there has not been telephone service for the last three months and have not received Link Up benefits in the last two years. This Notice was adopted in response to waiver requests from the States of Maine and New York. Some telephone companies had declined to participate in the program due to the existence of non-means-based eligibility criteria. The Commission was concerned that the three-month and two-year eligibility rules were discouraging participation in Link-Up America. Data from a pilot program indicated that approximately 15 percent of Link-Up applicants had been rejected for failure to meet the three month rule. Therefore, the Commission proposed eliminating these rules for states and telephone companies that verify income eligibility but retaining these rules and requiring prior service verification in cases in which income eligibility is not verified.

On February 27, 1989, the FCC adopted and released a revision of the Link-Up America rules which eliminated two non-income criteria. Connection assistance will be available for one telephone line per household, at a subscriber's principal place of residence. To become

eligible for assistance when income is verified, a residential subscriber must meet the requirements of the state established income test, and not be a dependent, unless the subscriber is more than 60 years old. Alternatively, when income is not verified, a resident may self-certify according to the criteria stated above. However, the entity receiving certification (state or company) must verify that the customer has lived at an address where there has been no telephone service for at least three months, and has not received assistance within the last two years.

The Link-Up America rules encourage, but do not require, states to match the federal benefits and cover the remaining half of the connection charges. The states and LECs are encouraged to develop deferred payment plans for service commencement charges as well as to provide reductions in, or waivers of, security deposit requirements for low income customers who do not have poor credit histories.

Two states, California and New York, began offering a lifeline assistance program pursuant to Plan 1 in 1985. New York switched to Plan 2 in November 1987. At this time, forty-eight states, the District of Columbia, and Puerto Rico are participating in some type of federal lifeline assistance program for low income Americans.

Federal assistance for the lifeline plans was funded through the interstate carrier common line charge (CCLC) until April 1989, at which time all three plans began to be funded through direct billing of the interexchange carriers (IXCs) by NECA. Under the new funding procedures, IXC are responsible for paying lifeline assistance if they have at least 0.05% of the nationwide presubscribed lines.

Under the new funding process, which began on April 1, 1989, the reimbursements under the program are allocated based on expenses submitted to NECA by participating LECs. NECA files a lifeline assistance rate which is billed directly to interexchange carriers. The revenues are used to pay certified exchange carriers for matching lifeline assistance costs. Further, each state determines the scope of program eligibility through the selection of means tested state assistance programs like AFDC, SSI, food stamps and medical assistance. The lifeline assistance funds are replenished from revenues of the IXC based on the carriers presubscribed lines.

Table 2.5 provides data, for each state and telephone company with a lifeline program, on the amount of money reimbursed to offset the subscriber line charge waiver. The amounts shown in Table 2.5 do not include local matching rate reductions. Table 2.6 provides similar data for the Link-Up America program.

Since the January 1991 Monitoring Report, one report was filed with the FCC: "Targeted Price Subsidization of Access to the Telecommunications Network", by Vinson Snowberger, (Journal of Regulatory Economics 2:415-431;

1990). The article says the universal service commitment is motivated by both the "widely acknowledged presence of network externalities; and by the merit-good characteristics of access to the telecommunications network." The article postulates that appropriate subsidies to the lowest income households are efficient because these households "exhibit lower penetration rates and greater value of price elasticities of connection than do remaining ratepayers". Equations are derived for calculating the optimal flat rate charge and the optimal rates of subsidization within the context of existing federal and state low income telephone assistance programs.

Public Service Commission	X		5/21/91

Note: State commissions may request FCC certification in Federal assistance programs for all carriers in the state or for selected local exchange carriers.

Local telephone companies may request FCC certification independent of state action. Where no state action is taken, the LEC is listed in the table under participating program along with the date certified by the FCC.

State commission requests for certification may follow the approval of local companies certified by the FCC. A state commission may have two dates where certification reflects an extension of eligibility within the state to a more inclusive program for low-income subscribers.

The list of certified states and/or local telephone companies indicates the extent of participation by carriers and the availability of Lifeline and Link-Up assistance in each state.

- * California is the only state still offering a Lifeline program under Plan 1 (the 50% waiver of the SLC).
- ** In response to a Class Action Suit filed in the Circuit Court of Cook County, Illinois, the Illinois Commerce Commission on its own motion terminated both the certified lifeline and Link Up programs implemented on February 1, 1991.

3. Costs and High Cost Assistance

On a nationwide average basis, approximately 27 percent of local exchange carrier (LEC) local loop costs are allocated to the interstate (federal) jurisdiction,¹ and 73 percent are allocated to the state jurisdiction. The average cost per loop, however, varies significantly among LECs. The Commission's high cost assistance program enables LECs with very high per loop costs to allocate more of their loop costs to the interstate jurisdiction, thus recovering these costs from interexchange carriers and leaving less costs to be recovered through state rates. In this manner, the high cost assistance program operates to hold down local rates and thereby furthers one of the most important goals of federal and state regulation -- the preservation of universal telephone service. Consequently, the funding of this high cost assistance is known as the Universal Service Fund (USF). Acting on the recommendation of the Federal-State Joint Board in CC Docket No. 80-286, the Commission adopted rule changes that, effective January 1988, retargeted federal assistance provided to high cost LECs. This section of the report outlines the high cost assistance program and the changes adopted by the Commission, and discusses the high cost data included in the report.

The Commission regulates the recovery by LECs of that portion of their total costs associated with the provision of interstate services. The states regulate the recovery of costs associated with intrastate services (local service and state long distance services). The Commission's high cost assistance program relates to the allocation between the state and interstate jurisdictions of non-traffic sensitive (NTS) "local loop costs" -- a term that refers to the costs of outside telephone wires, poles, and other facilities that link each telephone customer's premises to the public switched telephone network. These costs are allocated between the state and interstate jurisdictions because all local loops can be used for making and receiving state and interstate telephone calls.

Pursuant to the changes recommended by the Joint Board and adopted by the Commission, high cost assistance has been retargeted to increase benefits to small and medium sized LECs beginning in January 1988. This retargeting took the form of changes in the additional interstate cost allocation for such LECs. The old and new high cost formulas are compared in Table 3.1.²

1 Of this amount, approximately 26 percent is a direct allocation by the transitional subscriber plant factor, and approximately 1 percent is covered by the universal service fund.

2 Of course, the percentages shown in the table are in addition to the

The Commission's high cost assistance program is being implemented during a period in which the basic interstate allocation of loop costs is being shifted from a level based on the Subscriber Plant Factor (SPF) to a flat allocation factor of 25%. Both of these changes are being phased in over the same eight-year period.

The Commission's high cost assistance program is administered by the National Exchange Carrier Association (NECA). As part of the administration of the program, NECA collects certain cost data from LECs that provide service to approximately 98% of the nation's subscribers.³ Each year NECA collects NTS cost and loop data from the previous year, and uses it to distribute high cost assistance in the following year. These reports are filed with the FCC in September. On September 4, 1990, NECA reported new data for 1989. State totals based on that report, covering cost data for 1989, are presented in Table 3.2. This table shows unseparated NTS costs (Revenue Requirement), the number of loops, and costs per loop. It also shows the universal service fund calculation for 1991, using 1989 data, based on the new high cost formula which took effect in 1988. The introduction of the USF is being accomplished over an eight-year transition period which began in 1986. Since 1991 is the sixth year of this transition, the annual USF payment for 1990 will be 6/8 of the amount calculated from the high cost formula. The final column shows the percentage of the total USF that goes to companies in the state. Corresponding data for individual company study areas can be found in the January 1991 Monitoring Report.

Table 3.3 shows the actual payments that have been made through the USF since its inception. The first column indicates the year in which the NTS costs were incurred. The second column indicates the year in which the USF payments were made. The third column indicates the amount of those payments, based on the product of the transition factor shown in the fourth column and the full amounts (calculated from the formulas in Table 3.1) shown in the fifth column. Any deviations in the USF amounts shown in Table 3.3 from amounts previously reported (including the amounts shown in Table 3.2) are due to subsequent cost revisions after the initial filing.

basic allocation of NTS costs to the interstate jurisdiction.

3 These are the carriers that settle on a cost basis. Costs for the remaining LECs, which settle on an average schedule basis, are attributed by NECA on the basis of those carriers' average number of loops per exchange.

TABLE 3.1

4. Network Usage and Growth

The amount of traffic carried on the public switched network is a vital concern to the Joint Board and the Commission, since the interstate toll rate decreases that have accompanied the subscriber line charge increase were designed to make use of the network more efficient and to stimulate traffic growth. To monitor use of this network, the National Exchange Carrier Association (NECA) provides monthly reports to the Commission on the volume of switched interstate usage. To supplement this information, the Joint Board recommended that the larger local telephone companies also provide, on an annual basis, their total switched minutes of use, their interstate switched minutes of use, and their Subscriber Plant Factor (SPF), Subscriber Line Usage (SLU), and Dial Equipment Minutes (DEM) factors. The Joint Board recognized that much of this information was not previously collected by any single entity and that reports could be received and consolidated by some other entity (such as NECA). The data reported in this section includes revisions of the 1989 data that were contained in our previous reports for non-Tier 1 companies.¹

This report includes data on switched telephone traffic as reflected in the NECA calculations of carrier common line (CCL) access minutes of use from January 1989 through April 1991. Table 4.1 shows the latest available figures on minutes of use for interstate traffic as reported by NECA, derived from the Common Line earned revenues. Tables 4.2 and 4.3 show the figures for large (Tier 1) and small (non-Tier 1) companies, respectively. These figures do not include the minutes from the closed end of WATS. Similar data, extending back to mid-1984, are contained in earlier editions of this report. These are summarized in Table 4.4 on quarterly basis.

The only other new information received since the last report was revised 1989 data for some non-Tier 1 companies. Table 4.5 shows annual access minutes for all non-Tier 1 companies for 1989. Table 4.6 presents the number of loops, messages,² and subscriber line usage minutes for non-Tier 1 cost companies for 1989. Table 4.7 presents the number of dial equipment minutes and the SLU, SPF, DEM, and transitional DEM separations factors for non-Tier 1 cost companies for 1989.

1 A Tier 1 carrier is a local exchange carrier that has \$100 million or more annually in revenue from regulated telecommunications for five consecutive years.

2 Message counts are for all switched calls, including WATS and 800 service.

NECA has provided the following descriptions of the minutes of use measures:

Subscriber Line Usage (SLU) represents minutes of use (MOU) over jointly used subscriber lines in a study area. SLU is defined in the FCC rules, Part 36, paragraph 154(e). It is composed of all exchange, MTS MOU, and only originating 800 and terminating out-WATS MOU. SLU represents exchange, local exchange carrier (LEC) intra-LATA and corridor toll MOU, and feature groups A,B,C, and D MOU. Terminating 800 and originating out-WATS MOU are excluded. SLU also includes MOU on directly terminated toll stations or similar facilities.

Dial Equipment Minutes (DEM) represent all switched holding time minutes in a local dial office. DEM is defined in the FCC rules, Part 36, paragraph 125(b). It is composed of all originating and terminating exchange, MTS, 800, and out-WATS MOU. DEM represents exchange, LEC intra-LATA and corridor toll, and feature group A,B,C, and D MOU. (Please note that due to its unique switching arrangements, feature group A in DEM includes both serving office and end office MOU.) DEM does not include MOU in directly terminated toll stations or similar facilities, because they do not use local dial office facilities.

Premium CCL access MOU consist of feature groups A and B traffic originating from or terminating at offices converted to equal access, plus all feature groups C and D, and interstate intralATA MOU.

Non-premium CCL access MOU consist of feature groups A and B traffic originating from or terminating at offices not converted to equal access.

Access MOU (both premium and non-premium) are "earned MOU" which are derived by dividing the premium or non-premium earned revenues by the corresponding rate. This definition of access minutes is in agreement with the 1990 TRP and ARMIS reports. Access minutes of use generating revenues have been discounted, which can produce distortions in revenue amounts. Further, revenues are normalized to include changes in terminating/originating and percent interstate use factors, billing adjustments, and the imputations of access charges (where applicable). Revenues are also calendarized, which will change derived minutes.

5. Rates and Revenues

This section contains information on telephone price indexes and rate levels. First, it describes and presents a series of price indexes maintained by the Bureau of Labor Statistics. Second, it discusses rate levels and changes in average rate levels. Third, it summarizes rate cases pending before state regulatory commissions. These cases are an important indicator of future local rate changes.

CHANGES IN THE PRICE OF TELEPHONE SERVICES:

The Bureau of Labor Statistics (BLS) collects information on telephone service as part of three separate programs -- the Consumer Price Index (CPI), the Producer Price Index (PPI), and the Consumer Expenditure Survey. The monthly price indexes represent prices sampled in the middle of the month.

A. Long-Term Trends in the Overall Price of Telephone Service:

A Consumer Price Index for telephone services was first published in 1935.¹ Since that time, telephone prices have tended to increase at a slower pace than most other prices. The most recent data are for June 1991. For the 12 months ending June 1991, the nation's overall level of prices (measured by the CPI for all items) rose by 4.7%. The CPI for telephone services rose by 1.3% during the same period. The CPI for telephone services is composed of three subindexes. During the most recent 12 months, the local service component (including subscriber line charges) increased by 2.9%, while the price of interstate toll calls fell by 2.2%, and the price of state toll calls fell by 2.3%.

Table 5.1 shows long run changes in the Consumer Price Indexes for all items, all services, telephone services, each of the seven major categories that currently constitute the overall CPI, and several services that are often characterized as public utilities. The price of telephone service has increased less rapidly than almost any other category when viewed over a long period of time.²

1 BLS publishes two sets of Consumer Price Indexes. The CPI-U, used herein, is based on expenditures of all urban consumers. The CPI-W series is based on expenditures of urban wage earners and clerical workers.

2 For a description of the methodologies used by the BLS in calculating price indexes, see Primer and Sourcebook on Telephone Price Indexes and Rate Levels, published by the FCC in April 1987.

B. Recent Annual Changes in the Overall Price of Telephone Service:

The CPI index of telephone services is based on a "market basket" intended to represent the telephone-related expenditures of a typical urban household. It includes both local and long distance services. Changes in telephone prices tend to lag behind other price changes. Overall inflation in the American economy peaked in 1979 and 1980. In contrast, the price of telephone services rose most rapidly during the years 1981 through 1984, with the rate of increase declining since then. The annual rate of change during recent years is shown in Table 5.2 for the Gross National Product fixed weight price index (which reflects inflation throughout the economy), the overall CPI (which measures the impact of inflation on consumers), and the CPI for telephone services.

Table 5.2
Annual Rate of Change in Price Indexes*

	GNP Fixed Weight Price Index	All Items	CPI: Telephone Services
1978	7.2%	9.0%	0.9%
1979	8.8	13.3	0.7
1980	9.8	12.5	4.6
1981	8.5	8.9	11.7
1982	5.0	3.8	7.2
1983	3.9	3.8	3.6
1984	3.7	3.9	9.2
1985	3.6	3.8	4.7
1986	2.3	1.1	2.7
1987	3.8	4.4	-1.3
1988	4.6	4.4	1.3
1989	4.0	4.6	-0.3
1990	4.7	6.1	-0.4
1991**	4.2	4.7	1.3

* Measured December through December except for 1991.

** Measured June through June except for the GNP Fixed Weight Price Index which is based on data for the second quarter through the second quarter.

C. Price Indexes for Local Service:

The Bureau of Labor Statistics publishes a number of price indexes related to local telephone service, two of which are important to the monitoring program. The CPI index of local telephone charges is based on a broadly defined "market basket" of local services that includes monthly service charges, message unit charges, equipment, installation, additional services (such as Touch-Tone and Call Waiting), taxes, subscriber line charges, and all other consumer expenditures associated with local telephone services except long distance charges. In contrast, the PPI index of monthly residential rates is much more narrowly defined. It is based only on monthly service charges for residential service, optional Touch-Tone service, and subscriber line charges. It excludes taxes and all other telephone service charges. The annual rates of change for these two indexes are presented in Table 5.3.³ In the CPI index, about half of the 1984 increase occurred during January, reflecting adjustments made at the time of AT&T's divestiture of its operating companies.

³ Telephone rates rose at a similar pace in 1990 and in the first part of 1991. Published index levels, however, reflect a \$8.72 per access line credit for Southwestern Bell customers in Texas in December. This appears to have caused the local service and the overall telephone service indexes to drop significantly in December, with a corresponding rise in January. The use of December index levels to calculate annual price charge leads to a slight understatement of price charges in 1990 and corresponding overstatement in 1991.

Table 5.3
Annual Rate of Change in Price Indexes*
For Local Telephone Service

	CPI: All Local Charges	PPI: Monthly Service Charges For Residential Service
1978	1.4%	3.1%
1979	1.7	1.6
1980	7.0	7.1
1981	12.6	15.6
1982	10.8	9.0
1983	3.1	0.2
1984	17.2	10.4
1985	8.9	12.4
1986	7.1	8.9
1987	3.3	2.6
1988	4.5	4.5
1989	0.6	1.9
1990	1.0	1.5
1991**	2.9	2.5

* Measured December through December except for 1991.

** Measured June through June.

D. Price Indexes for Long Distance Service:

CPI data are available for intrastate toll and interstate toll services since December 1977. Table 5.4 presents the annual changes in these series for recent years. The high inflation of the late 1970's is reflected in the long distance price increases beginning in 1980. Interstate toll rates have steadily fallen since 1983, and intrastate toll rates have fallen in the last four years.

Table 5.4
Annual Rate of Change in Price Indexes*
For Long Distance Service

	CPI: Interstate Toll calls	CPI: Intrastate Toll calls
1978	-0.8%	1.3%
1979	-0.7	0.1
1980	3.4	-0.6
1981	14.6	6.2
1982	2.6	4.2
1983	1.5	7.4
1984	-4.3	3.6
1985	-3.7	0.6
1986	-9.4	0.3
1987	-12.4	-3.0
1988	-4.2	-4.2
1989	-1.3	-2.6
1990	-3.7	-2.2
1991**	-2.2	-2.1

* Measured December through December except for 1991.

** Measured June through June.

E. Monthly Price Index Data:

Monthly data for the CPI telephone indexes are shown in Table 5.5.
Monthly data for PPI indexes are shown in Table 5.6.

INFORMATION ON RATE LEVELS:

This section describes the level of local and long distance rates and access charges in dollar terms.

Local Rates

Local rates are regulated by state regulatory agencies and vary greatly from area to area. Characterization of any rate as "typical" is therefore difficult. In most states, the Bell Operating Companies and larger independent telephone companies charge higher rates in metropolitan areas than in rural areas -- a pricing practice that dates back to the turn of the century and is traditionally justified by the belief that the value of the service provided is higher for subscribers with more populous local calling areas. This also reflects the fact that the operating companies forego toll revenue when exchange calling areas increase in size. California differs from most states in that rates are averaged throughout the state. There, the basic local rate is \$8.35 for areas served by Pacific Bell and \$9.75 for areas served by General of California.

Table 5.7 presents average local residential rates. The price indexes published by the BLS indicate percentage changes in the price of the telephone services. The BLS does not publish the actual level of rates. The averages shown in Table 5.7 are based on a FCC survey using the same sampling areas and weights used by the Bureau of Labor Statistics (BLS) in constructing the Consumer Price Index. In October 1990, the national average for flat rate residential service was \$12.40 monthly. Lower-priced service alternatives are frequently available, at an average monthly charge of \$5.66. ⁴

4 The methodology used in conducting the survey is contained in the Primer and Sourcebook on Telephone Price Indexes and Rate Levels.

Table 5.7
Average Monthly Residential Rates
(in October of each year)

	1983	1984	1985	1986	1987	1988	1989	1990

Total	11.58	13.35	14.54	16.13	16.66	16.57	17.53	17.78
Lowest Generally								
Available Monthly Rate	\$ 5.37	\$ 5.62	\$ 5.75	\$ 5.96	\$ 5.81	\$ 5.67	\$ 5.67	\$ 5.66
Subscriber Line Charges*	.00	.00	1.01	2.04	2.66	2.67	3.53	3.55
Taxes	.56	.58	.70	.84	.94	.91	1.03	1.14
Total	5.93	6.20	7.46	8.84	9.41	9.25	10.23	10.35
Minimum Connection Charge	\$35.01	\$43.71	\$44.32	\$45.63	\$44.04	\$42.94	\$42.71	\$43.02
Taxes	1.75	2.19	2.22	2.28	2.20	2.11	2.24	2.37
Total	36.76	45.90	46.54	47.91	46.24	45.05	44.95	45.39

* Includes both Federal and State charges.

The local rate averages shown in Table 5.7 are based on rates that are available to all customers. Many states have programs that subsidize monthly service charges or connection fees paid by needy households. These programs are further described in Section 2 above. Most of these programs are part of the FCC sponsored Lifeline and Link Up programs. The most recent available local rate survey, reflecting data as of October 15, 1990, indicated that assistance for monthly service charges was offered in 61 of the 95 sample cities, representing 66% of urban consumers. Connection assistance was offered in 91 of the 95 sample cities representing 98% of urban consumers. In October 1990, Lifeline and similar assistance programs provided an average benefit of \$7.36 per month. Link Up and similar connection assistance programs reduced connection costs by an average of \$24.42.

Table 5.8 presents average monthly rates for single line business customers. Like the residential rates presented above, they are based on a FCC survey using the same sampling areas and weights used by the BLS in constructing the Consumer Price Index.

Table 5.8

Average Monthly Single Line Business Rates
(in October of each year)

	1983	1984	1985	1986	1987	1988	1989	1990
Representative Rate *	\$29.16	\$32.74	\$33.42	\$34.26	\$33.71	\$34.48	\$33.49	\$33.28
Subscriber Line Charges**	.00	.00	1.01	2.04	2.68	2.69	3.55	3.57
Taxes	3.35	3.76	3.96	4.17	4.18	3.95	4.21	4.24
Total	33.51	36.51	38.39	40.47	40.57	40.12	41.25	41.09
Minimum Connection Charge	\$56.04	\$68.84	\$70.82	\$79.94	\$72.15	\$72.51	\$72.75	\$73.33
Taxes	3.08	3.79	3.90	4.01	3.97	3.92	4.06	4.16
Total	59.12	72.63	74.72	76.95	76.12	76.43	76.81	77.49

* The "representative" rate is the monthly single line rate for touch tone service with unlimited service where offered, and the measured service rate with 200 messages in other cities.

** Includes both Federal and State charges.

Long Distance Rates

Table 5.9 compares the prices of directly dialed interstate long distance calls in all mileage bands and rate periods based on AT&T's tariffed rates in effect during January 1984 and July 1991. These rates are the basic message toll service rates and do not reflect discounts available in special calling plans. They also do not reflect any taxes or surcharges imposed by some states. During this period, AT&T's per minute charges for directly dialed interstate calls have been reduced about 45%.

Table 5.9
 Changes in the Price of Directly Dialed Long Distance Calls
 (AT&T Interstate Rates)

Calling Distance in airline miles, rate center to rate center		Five minute calls			10 minute calls

Subscriber Line and Access Charges

Monthly subscriber line charges (or "end user" charges) were first imposed in 1984 and were charged to residential customers beginning in 1985. Table 5.10 presents the level of these charges over time.

Table 5.10

Interstate Subscriber Line Charges by Local Telephone Companies to End Users (In Dollars per Month per Line)

	Residential and Single Line Business *	Multiline Business **	Embedded Centrex Rate Cap ***
05/26/84 to 05/31/85	\$0.00	\$4.99	\$2.00
06/01/85 to 09/30/85	1.00	4.99	2.00
10/01/85 to 05/31/86	1.00	4.97	2.00
06/01/86 to 12/31/86	2.00	4.97	3.00
01/01/87 to 06/30/87	2.00	5.12	3.00
07/01/87 to 12/31/87	2.60	5.12	4.00
01/01/88 to 11/30/88	2.60	5.01	4.00
12/01/88 to 03/31/89	3.20	5.01	5.00
04/01/89 to 12/31/89	3.50	4.94	6.00
01/01/90 to 06/30/90	3.48	4.84	6.00
07/01/90 to 12/31/90	3.48	4.83	6.00
01/01/91 to 06/30/91	3.48	4.77	6.00
07/01/91 to present	3.49	4.74	6.00

* The monthly subscriber line charge for residential and single line business customers is capped at a maximum rate of \$3.50 monthly. Local companies are not permitted to charge the full amount unless justified by their underlying costs. As a result, a few companies do not charge the full \$3.50.

** The monthly subscriber line charge for multiline business customers has been capped at a maximum rate of \$6.00 monthly since 1984. Local companies are not permitted to charge the full amount unless justified by their underlying costs. As a result, some companies do not charge the full \$6.00. This column represents the national average calculated by NECA.

*** These rates represent the maximum charge applied to centrex lines in place or on order as of July 27, 1983. Prior to April 1, 1989, "embedded" centrex lines were capped at levels lower than new centrex lines. Customers with new centrex lines paid the multiline business subscriber line charge. Since April 1, 1989, all centrex lines have been charged the same rate as multiline business.

Access charges by local telephone companies to long distance carriers are an important component of the overall cost of providing long distance service. Table 5.11 shows the history of the average levels of these charges.

Table 5.11

Interstate Charges by Local Telephone Companies to Long Distance Carriers
(National Average for "Premium" Service in Cents per Minute)

	Carrier Common Line Charge Per Originating Access Minute 1/	Carrier Common Line Charge Per Terminating Access Minute 1/	Total Traffic Sensitive Charge Per Access Minute 2/	Total Charges Per Conversation Minute 3/
05/26/84 to 01/14/85	5.24	5.24	3.1	17.3
01/15/85 to 05/31/85	5.43	5.43	3.1	17.7
06/01/85 to 09/30/85	4.71	4.71	3.1	16.2
10/01/85 to 05/31/86	4.33	4.33	3.1	15.4
06/01/86 to 12/31/86	3.04	4.33	3.1	14.0
01/01/87 to 06/30/87	1.55	4.33	3.1	12.4
07/01/87 to 12/31/87	0.69	4.33	3.1	11.5
01/01/88 to 11/30/88	0.00	4.14	3.1	10.6
12/01/88 to 02/14/89	0.00	3.39	3.0	9.6
02/15/89 to 03/31/89	0.00	3.25	3.0	9.5
04/01/89 to 12/31/89	1.00	1.83	3.0	9.1
01/01/90 to 06/30/90	1.00	1.53	2.5	7.8
07/01/90 to 12/31/90	1.00	1.23	2.5	7.5
01/01/91 to 06/30/91	1.00	1.14	2.4	7.2
07/01/91 to present	0.96	0.96	2.4	7.0

- 1/ Prior to 4/1/89, the rates shown are nationally uniform "premium" rates specified in tariffs filed by the National Exchange Carrier Association (NECA). Since 4/1/89, the terminating rate is no longer identical for all companies, and the rate shown is an average. Where equal access is not available, carriers other than AT&T pay discounted "non-premium" rates.
- 2/ Traffic sensitive switched access rates are not subject to mandatory pooling and are thus not nationally uniform. The rate shown in this column has been estimated by the FCC staff as a weighted average that includes both switching and transport charges.
- 3/ Long distance carriers are billed originating access charges for the time that the local network is tied up with calls that are not completed and for the time involved in setting up calls. As a result, the number of originating access minutes exceeds the number of conversation minutes. Using the ratio of access minutes to

conversation minutes presented by AT&T for its domestic interstate service, the charges in this column have been calculated as follows: 107% of the originating carrier common line rate + 100% of the terminating carrier common line rate + 107% of the traffic sensitive rate (for originating access) + 100% of the traffic sensitive access rate (for terminating access).

STATE TELEPHONE RATE CASES:

The actions of state regulatory commissions provide important indicators of future local and state toll rate levels. Rate cases completed by the state commissions tend to result in immediate rate changes. At the same time, the amount of rate relief requested by local telephone companies, but not yet acted upon by state commissions, provides an indication of future rate changes.

At the time of divestiture, rate cases pending before state public utility commissions totaled nearly \$7 billion. During the first half of 1984, state commissions completed action on a number of extraordinarily large rate cases. After the first half of 1984, however, the level of activity in state cases diminished substantially. At mid-1990, New York Telephone Company reported rate cases of over \$800 million pending before the New York Public Utilities Commission. The total amount of rate increases requested and pending before other state commissions was only about \$200 million. During 1987, 1988, 1989, and 1990, the dollar amount of rate reductions and refunds ordered by state commissions exceeded the dollar amount of rate increases authorized. Since it typically takes more than a year for a rate case to be completed, the low level of pending cases -- viewed in conjunction with the recent reductions ordered by state commissions -- should indicate a low level of state and local increases during at least the next year. The data on state rate cases are shown in Table 5.12.

The information in Table 5.12 reflects data we have received from the Bell Operating Companies, Contel, GTE, and United Telephone on pending state rate cases. In addition to this, we also include information from smaller companies which is submitted by state utility commissions, information published by the National Regulatory Research Institute, and any additional information brought to our attention or appearing in a telecommunications publication.

ADDITIONAL DATA RECEIVED

Twenty-five state utility commissions have filed data. We have not included the data in this report because the data are voluminous. However, the data are available for research and reference in the Public Reference Room maintained by the FCC's Industry Analysis Division. A summary of the rate information that has been filed is in Table 5.13.

6. Bypass

The regional Bell holding companies and GTE submitted their fifth bypass reports on April 30, 1991. The estimated quantity losses for the year 1990 are shown in Table 6.1. These estimated losses total 122 billion switched minutes of use and 0.6 million private line circuits. The switched minutes loss estimate represents about a 12 percent increase from the estimate for the previous year.

The estimated revenues losses due to bypass are shown in Table 6.2. It should be noted that these losses represent the telephone companies' unaudited estimates of revenue loss and do not reflect associated cost savings. Also, no attempt has been made to estimate what proportion of these losses are due to uneconomic bypass caused by the CCL charge. The total revenue losses were estimated to be about \$4.0 billion, based on annualized 1990 rates. This represents about a 7 percent increase from the previous year. The lower percentage increase in revenue losses is the result of the reduction in access charges between 1989 and 1990.

To put the latest report in historical perspective, summaries of the four previous bypass reports are shown in Table 6.3. The data in this table reflect subsequent revisions since the original submission of this information, and thus may differ from the data in previous monitoring reports.

While not shown here, each carrier has also submitted data for individual states. This information indicates that estimated bypass is heavily concentrated in the most populous states. The carriers have also reported many new examples of bypass. We note that since these are just examples, their totals cannot be regarded as totals for all new bypass. Therefore, we have not computed such totals. Also, as some companies have noted, some types of bypass are difficult to detect until long after they occur. The number of reported bypass abandonments is small. The descriptive materials included by the carriers in their April 1990 bypass reports are summarized following Table 6.3.

Ameritech

Ameritech reports an increase of approximately 6% in facility switched bypass in terms of minutes of use diverted. Similarly it reports increases of 10% in private line circuits diverted by facility bypass, and an increase of approximately 45% in minutes of use associated with service bypass. Overall revenue loss growth since the April 1990 report is estimated at 8%.

Bell Atlantic

Bell Atlantic reports that bypass continued to displace a significant amount of Bell Atlantic's switched and special access revenues in 1990. It estimates total revenues lost to bypass at \$648 million. Of particular concern to Bell Atlantic are the growing number of fiber optics service and facilities providers which are active in each of its major metropolitan markets. Bell Atlantic reports that it has identified a significant increase in bypass via fiber facilities, which were especially pronounced in its Washington, D. C. and Maryland service areas. Not all the bypass examples shown in Bell Atlantic's report represent new occurrences since the April 1990 report. Some are older cases which have only recently been identified.

Bell Atlantic reports that switchable minutes of use carried on Bell Atlantic Special Access circuits declined slightly from 16 billion to 15.6 billion, reflecting a continued strong migration from voice grade to high capacity access circuits, including DS-1 and DS-3. The loss of equivalent switched access revenues declined from \$556 million to \$492 million, primarily reflecting a further decrease in the composite rate applied to switched access minutes. Bell Atlantic reports a decline in minutes of use and private lines displaced by facility bypass. Displacement by bypass facilities of switched access decreased from an annualized 8.3 billion minutes to 8.0 billion minutes. The number of private lines decreased from 156,680 to 150,143.

BellSouth

BellSouth has not changed its study methodology from last year but also includes fiber data obtained from an additional source. Facility bypass estimates are based upon the number of voice grade equivalent microwave, fiber VSAT and other bypass technology circuits (excluding video). Microwave circuit data was gotten from a March 1991 Comsearch Report by determining the interLATA (interstate and intrastate) two-point and multi-point routes. Fiber optic networks were identified from a March 1991 report by Kessler Marketing Intelligence showing networks in place as of December 1990. That report deals with growth in fiber-based alternate local transport providers (ALTs) and use of fiber by electric utilities for purposes other than maintenance, monitoring, or providing electric power.

BellSouth reports that increases in both minutes of use and revenue lost to Service Bypass are primarily due to an increase of over 76% in the number of HICAP circuits while increases in facility bypass are associated with a

63% increase in VSAT voice grade equivalents and an increase of 13% in microwave VGEs applicable to Facility Bypass.

GTE

GTE estimates that the total 1990 bypass loss is up 24% over the amount estimated for 1989 in terms of minutes of use and up 18% in terms of overall revenue loss. It indicates that 74% of minutes of use lost are to service bypass and 26% to facility bypass. Growth rates for facility and service bypass are reported at 23% and 25% respectively. Especially high levels of facility bypass activity are noted in Florida where metropolitan area networks grew nearly 700%, according to the company.

NYNEX

NYNEX indicates that it has observed a large increase in facility bypass, but only a small increase in service bypass. Also the ratio of facility bypass to service bypass has changed; the impact of service bypass is now less than that of facility bypass. In terms of voice grade equivalent circuits, facility bypass has increased by 49.8%, while service bypass increased only 4.3%. As a result, NYNEX reports that the ratio of service bypass to total bypass has declined from 55.5% to 46.2%. Total bypass as measured in voice grade equivalent circuits has increased 24.7%. The increases in total bypass as measured in minutes of use (MOU) and revenue loss, are 4.7% and 5% respectively. Fill and voice/data ratio factors, as well as price changes, distort the results for comparison purposes with prior reports.

NYNEX reports the offering of colocation by its telephone companies which will greatly expand the reach of alternate access providers, enhancing their ability to provide facilities bypass for special and switched access both for originating and terminating traffic. NYNEX states that these events are combining to create substantial additional alternatives in the access market, alternatives which are not reflected in Bypass Reports to date.

Pacific Telesis

Pacific Bell expects bypass to grow significantly as a result of technological changes and Alternative Access Providers' (AAPs) increased interest in the California market. Both Metropolitan Fiber Systems (MFS) and Teleport Communications have completed networks in San Francisco and Los Angeles. Bay Area Teleport has a network throughout the greater San Francisco Bay Area.

Pacific Bell experienced a 53% increase in lost minutes of use (MOUs) associated with interLATA facility voice bypass. Revenue loss increased only 25% due to downward price changes in switched access MOUs. Revenue loss attributed to facility bypass increased 56%. Minutes of use lost associated

with service bypass increased by 33% while the associated revenue loss only increased 4%.

Southwestern Bell

Southwestern Bell continues to advise caution in comparing aggregate bypass loss estimate data with that previously reported. Although the company aggregate report reflects a decrease in the estimated revenue loss due to bypass, the associated minutes of use lost due to bypass has increased. Thus the revenue loss is due primarily due to a reduction in the average rate per minute for switched services and a reduction in the average rate per circuit for private line circuits.

Southwestern Bell indicates that it cannot fully determine the number of end users employing bypass arrangements. Its study contains examples of bypass which it has been able to document since its April 30, 1990 report and includes examples previously reported.

US West

US West reports that the availability of facility bypass technologies is increasing rapidly with a wide range of bypass technologies available to sophisticated end users and IXCs. These systems can be grouped into two broad categories, radio systems and cable systems. Data reported this year by US West reflects changes in methodology and assumptions. Estimated minutes of use (MOU) bypass increased 11.6% over the April 1990 filing. The estimated number of private line circuits lost to facility bypass-private line increased 11.5% over the April 1990 filing. Minutes of use loss associated with service bypass increased 4.7%.

AT&T Facility Bypass Data

Information from users and providers of bypass arrangements has generally not been forthcoming because the companies involved regard it as proprietary and are not required to file it. AT&T, however, has been required to file monthly facility bypass reports to the FCC since June 1, 1985, in response to an order regarding AT&T Communications' Tariffs 9, 10, and 11.¹ Although this information is just for one company, it is a major one, and although the amount of information available is limited, it is useful as another perspective on bypass.

Table 6.4 shows the number of customer requests received by AT&T for technological bypass involving connections at its central offices, the number

1 Memorandum Opinion and Order, FCC 85-221, released May 28, 1985, at para. 117 and 118.

of agreements under which customers provide access, and the number of agreements where AT&T arranges access through alternative access suppliers. The table also shows the number of DS-1 and DS-3 level channels involved. Each DS-1 can be multiplexed into as many as 24 equivalent 4Khz circuits, each DS-3 can be multiplexed into as many as 672 equivalent 4Khz circuits, although a significant number of the equivalent circuits may not be initially active. Table 6.5 shows the total equivalent 4Khz circuit capacity associated with the indicated bypass arrangements. This was done by weighting the number of DS-1s by 24 and DS-3s by 672. All the data in both tables are provided on an annual basis, showing new amounts for each year and cumulative totals.

AT&T has verbally indicated that much of the capacity shown is associated with vendors (such as urban fiber carriers) who request capacity for their future activities. AT&T indicated that it does not have any record of disconnects of this capacity, nor does AT&T expect that any significant activity in this form existed prior to 1985 when the data was first provided to the Commission.

At the end of 1990, based on Table 6.4 data, about 182,000 potential bypass circuits were linked to AT&T's network. These local bypass circuits can be connected to either end (or both ends) of an AT&T private line circuit. AT&T reports 586,000 private line circuits² or nearly 1.2 million possible connecting points for these local bypass circuits. Thus, perhaps 15% of AT&T's private line terminations can be described as being associated with bypass links.

2 AT&T Section 214 Annual 1990 Blanket Filing, WPC-6639.

7. Pooling and Rate Deaveraging

The transition to jurisdictionally-specific Carrier Common Line (CCL) charges occurred on April 1, 1989, for the following local exchange carriers (LECs) that withdrew from the National Exchange Carrier Association (NECA) CCL pool at that time: Ameritech, Bell Atlantic, BellSouth, Centel, Cincinnati Bell, Continental Telcom, GTE, NYNEX, Pacific Telesis, Rochester Telephone, Seneca-Gorham Telephone, Southern New England Telephone, Southwestern Bell, US West, United Telephone Systems, and Warwick Valley. Seneca-Gorham has since been acquired by Rochester Telephone. On July 1, 1990, Great Plains Communications and Hughes Telephone also withdrew from the NECA CCL pool. On July 1, 1991, Lincoln Telephone and Telegraph and Rochester Telephone's other cost study areas also withdrew from the NECA CCL pool.

The latest nationwide pool results provided by NECA are shown in Tables 7.1 and 7.2. Table 7.1 summarizes the CCL pool revenues and expenses for the year 1990 and, separately, for the first four months of 1990. Table 7.2 has corresponding figures for NECA's voluntary traffic sensitive pool.

NECA's latest report on the dimensions of long term support and transitional support payments among the LECs, based on the tariffs that became effective on January 1, 1991, follows. Table 7.3 shows the transitional support payments being received by Level 1 Receivers. The first column of this table shows the base amount from which the payments are calculated, and the third column shows the actual support payments. The transition factors in the second column will decline by .2 each year over a five year transition period. The final column shows the total transitional support to United and Contel after adjustment for their asset exchange. Table 7.4 shows the transitional support payments being made by Level 1 Contributors. Chart 7.1 summarizes the transitional support among carriers that withdrew from the NECA pool. Table 7.5 shows the long term support payments being made by Level 1 Contributors, in support of those companies remaining in the NECA CCL pool. Chart 7.2 summarizes the sources of revenue for the NECA CCL pool, showing the distribution of funds from long term support, CCL charges, subscriber line charges, and special access surcharges. Table 7.6 shows the total support payments being made by Level 1 Contributors.

As an indication of the effect of depooling on CCL rates, Chart 7.3 shows the average CCL rates being charged by the Bell companies and GTE,¹

1 Since depooling, each Bell holding company has a single company-wide terminating CCL rate except NYNEX, which has separate rates for New York Telephone and New England Telephone, and Pacific Telesis, which has separate rates for Pacific Bell and Nevada Bell. Companies (currently BellSouth and GTE) with an average rate over \$.01 are required to charge an originating rate of \$.01 and a higher terminating rate.

as well as the NECA rate for those companies remaining in the NECA pool. For comparison purposes, the average rate that NECA would have had to establish in absence of long term support payments is also shown.

TABLE 7.1
NATIONAL EXCHANGE CARRIER ASSOCIATION, INC.
SUMMARY OF POOL RESULTS FOR THE MONTH ENDING DECEMBER 31, 1990
REPORTED AS OF FEBRUARY 28, 1991

COMMON LINE (CL) (Note 1)	CURRENT MONTH	1990	
		Pool YTD	(Note 2)
Carrier Common Line (CCL) Earned Revenue			
Premium	\$11,993,906	\$151,156,561	
Non-premium	\$852,266	\$10,242,170	
Special Access Surcharge	\$72,128	\$969,712	
CCL Net Realized Uncollectibles	\$210	\$12,089	
CCL Net Earned Revenue	\$12,918,090	\$162,356,354	
End User Net Earned Revenues (Note 3)	\$28,601,181	\$338,015,374	
Total Common Line Net Earned Revenues	\$41,519,271	\$500,371,728	
CL Income from Interest Charged Construction	\$0	\$0	
Long Term Support	\$21,469,130	\$262,563,073	
Total Common Line Revenues	\$62,988,401	\$762,934,801	
NECA Administrative Cost	\$1,992,423	\$21,280,597	
Average Schedule Company Settlements	\$19,689,607	\$243,145,580	
Common Line Expenses and other Taxes	\$28,262,307	\$336,098,460	
Common Line Adjusted Federal Income Tax	\$2,490,219	\$31,560,267	
Total Common Line Expenses	\$52,434,556	\$632,084,904	
Common Line Residue for Distribution (Note 4)	\$10,553,845	\$130,849,897	
Common Line Net Investment	\$1,157,954,819	\$1,153,627,221	
Annualized Common Line Residue Ratio (Note 5)	10.94%	11.34%	

Note 1: All of the individual line items include some estimates and are subject to further adjustments under current NECA procedures.

Note 2: The 1990 Pool Year is the period beginning January 1, 1990 through December 31, 1990. The Net Investment is an average of the cumulative months reported.

Note 3: Amount includes End User SLC Waiver Revenue for NECA Tariff participants.

Note 4: Residue for Distribution is Total Revenues less Total Expenses.

Note 5: Annualized Residue Ratio in the CURRENT MONTH is calculated by dividing the amount of Residue for Distribution by the amount of Net Investment and multiplying by 12 months X 100. The 1990 Pool YTD is similarly computed except that the calculation is then divided by the number of Pool Year Reporting Periods.
