Service provider densification: learned in 4G, critical in 5G

Airspan Deployment

Traditional Deployment

ESSENTIAL PARADIGM SHIFT: CELL SITE PERFORMANCE AT CELL PHONE ECONOMICS

- A supply chain that mirrors cell phones:

- Third party logistics delivery van model
- Plug & play functionality
- Technology partners that scale
- Volume manufacturing and pricing
- Suitable product dimensions

Drastically different network densification between 4G & 5G

Before: Macro model

After: Densified

Airspan End-To-End Open RAN Vendor

5G-NR Software

-----Software-----

OPENRANGE software: cloud native – containerized – virtual

vCU, vDU

Open RAN software: 1 million lines of code defined over 18 generations of releases

- Supports splits 2,6 and 7,2 as defined by 3GPP, O-RAN, TIP and Small Cell Forum as well as full gNB
- Software technology to drive Airspan's open architecture

Airspan
Control
Platform
(ACP)

Complete network function controller & manager

- Deliver management and network orchestration applicable to any customer deployment, including Mobile operators, Private networks and Enterprises
- Provides flexibility to span and control single or multiple technologies, provide automated management and control, and integrate into existing customer systems

RAN
Intelligent
Controller

Class-leading self optimizing network solution

- Advanced algorithm suite specifically designed to address operators' needs when deploying small cells
- Distributed architecture that scales with the network
