

**Matthew Tuck, Senior Manager, Network Operations  
Verizon**

Matthew Tuck supports Global Operations in the Business Continuity Event Management team. His role includes responsibilities for managing sustainability planning, satellite backhaul solutions for wireless operations, and unmanned aircraft (drone) program management. Matthew's team supports disaster and event response, and they are responsible for satellite network architecture, performance for wireless operations, configurations, and the implementation of new solutions. His team trials and implements new solutions in the drone space and are heavily involved in disaster and emergency management coordination for portable assets and the intake and addressing of requests for network augmentation. Several such new solutions include the tethered flying cell sites and the application of a mid-earth orbit satellite solution used in response to Hurricane Ian.

Matthew's prior experience includes outside plant engineering of fiber optic systems, construction engineering, program management, and teaching at the high school level.

Matthew's hobbies include fishing, wakeboarding, baseball, softball, snow skiing, cooking, volleyball, and kayaking. His volunteer work has largely focused on middle and high school students and their growth and development as a coach and mentor.
