Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me). I'm really angry that AT&T took away my classic country music station (music from the 40s & 50s that I loved as a child) and gave me no other equivalent choice, even though I pay about \$200/month for the bundled service.

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. ## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. AT&T just notified me that starting May 23 it will be "increasing the U-verse Internet Data Allowance for many customers...there's a \$10 charge for each 50GB of data you use over the allowance amount." When I called about my rates and read this statement to the phone rep. I said "So this is how AT&T is getting around Net Neutrality." After about 10 seconds she said "Yes." Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast and AT&T have found another way to pick winners and losers: they apply arbitrary data caps, but exempt their own video content while counting all competing video services toward those caps. ## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. ## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T has already slowed our Netflix and Hulu streams, YouTube is nearly unviewable.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules. As a Verizon customer, I want to know exactly what is going on and what is being done about it.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. This is just as dirty and underhanded a trick as what was already ruled illegal. While not exactly the same, what this does is force app owners, website owners, etc. to pay Verizon blood-money so that they can be put in the zero-rated club.

Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have. The same reason that fast lanes undermine the entire philosophy of an Open Internet, these sneaky ways to get under the data cap allow for the same thing - profiteering by Verizon at the expense of the consumer. Honestly, it's double-dipping. Verizon charges consumers for access to the internet. We aren't paying for Verizon's version of the internet. And that's exactly what allowing this sort of behavior from them creates. It allows them to dictate what the internet is for their customers. That's just not right.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use. Again, I don't want Verizon to dictate to me what I can and cannot use. Not to mention that the criteria they are deciding this upon is based solely on who is paying them and who isn't/can't.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon, AT&T, Comcast, T-mobile, and others, are breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an internet user with a household of 4, I don't want these giants to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. Comcast for example limiting how many shows you can stream via Netflix, yet unlimited streams using inferior content from their Xfinity service is damaging to ecommerce, the economy, and unethical strong arm business tactics that harms other business trades/services. We pay for internet service, we should not be limited to the content of what the companies provide. I request that the FCC investigate Verizon and these other companies for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon and the other big players hate the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run,

everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Please protect Net Neutrality, now and again.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

I'm very pleased that the FCC has passed new regulations to protect Net Neutrality.

Verizon Does not appear to be honoring these new regulations. and the FCC should put a stop to it. Decisions regarding violations of this kind should not be made behind closed doors. I'm expecting an open debate to resolve issues such as the following:

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

The FCC has protected the open Internet by passing strong Net Neutrality rules. But now cable and phone companies that fought to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it via public process to decide where and how to enforce these rules.

Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

Such programs also create wrongful incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

The Internet can be the greatest system ever created for democracy, but if we do not regulate ISPs as Title 2 Net Neutrality is supposed to than it can be a great force against our democracy.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. ## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Company Complaining About:** Verizon

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

I very much admire what was done • for Net Neutrality, and I want to give you Kudos for making that happen. I would be grateful if the FCC keeps upholding the new rules and not allow companies like Comcast to undermine your authority. Comcast already charges too much in fees and rentals, and they make enough money as is, so please don't let them take more under the guise of data caps.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Internet use is just too expensive and severely limited to a few providers. Not fair at all to the consumer. Let other providers emerge and have more competitive rates.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Net neutrality is under attack and is critical to keep the internet democratic and fair. ATT is trying to weasel out of this and I urge you not to let them do this. Plus, you need to make sure that your investigation and decision on this is done in a completely transparent way so the public knows exactly what's going on. There is too much secret dealing in our government today and please don't be part of that.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet

loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

I believe throttling any site should be illegal, when we pay for the right to connect to the internet with our data plan, we should always be the one to decide what we watch and where we watch it, I am a customer of T-mobile, and I say NO! to throttling sites which I go to.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

We were so pleased when the FCC protected the open Internet by passing strong Net Neutrality rules last year in response to the millions of people who spoke out. So please take action to prevent the same cable and phone companies that fought so hard to destroy Net Neutrality from creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Most importantly, however, this decision should NOT be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created ANOTHER toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As a Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Stop caving in to lobbyists.

They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.
